اللَّهُمَّ لا سَهْلَ إِلَّا ما جَعَلْتَهُ سَهْلًا، وأنتَ تَجْعَلُ الحَزْنَ إذا شِئْتَ سَهْلًا — صلِّ على النبي ﷺ

Part A · Past Exam Questions

أسئلة الدفعات السابقة

1 ميدترم 2023–2022

Menstruation takes place about two weeks following ovulation as a result of:

a. Secretion of estrogen
b. Decreasing FSH
c. Increasing LH
d. Decrease in both estrogen and progesterone

2 ميدترم 2023–2022

Ovulation occurs at _____ of the menstrual cycle.

a. The beginning
b. The middle
c. The end
d. The first ten days

3 ميدترم 2023–2022

The hormone secreted from the anterior pituitary in the first half of the cycle in response to maturation of the follicle inside the ovary: تكرر في 2 مصادر

a. GnRH
b. FSH
c. Estrogen
d. Prolactin

4 ميدترم 2023–2022

The logical order of fetal growth during pregnancy is:

a. Ovum, embryo, zygote, fetus
b. Zygote, ovum, embryo, fetus
c. Ovum, zygote, embryo, fetus
d. Zygote, ovum, fetus, embryo

5 ميدترم 2023–2022

The site of fertilization is the:

a. Uterus
b. Urethra
c. Uterine tube
d. Ovaries

6 The hormone that works with estrogen to prepare the endometrium for implantation of a fertilized egg is: — ميدترم 2022–2021

a. LH
b. FSH
c. HCG
d. Progesterone

7 Which of the following is cell division without growth? — ميدترم 2022–2021

a. Cleavage
b. Conjugation
c. Fertilization
d. Development

8 The extra-embryonic structure that provides nutrition to the fetus is: — ميدترم 2022–2021

a. Chorion
b. Placenta
c. Amnion
d. Umbilicus

9 Fertilization of sperm and ovum takes place in the: — ميدترم 2022–2021

a. Ampulla of the oviduct
b. Isthmus of the oviduct
c. Fimbriae of the oviduct
d. Uterus

10 This usually occurs between days 13 and 15 of the menstrual cycle: — ميدترم 2022–2021

a. Ovulation
b. Shedding of the uterine lining
c. The lining of the uterus builds up
d. The lining remains in place for a possible embryo

11 Which of the following is an effect of the increased level of estrogen in the proliferative phase of the menstrual cycle? — كويز 1 – 2023

a. Thickening of cervical mucus
b. Rupture of corpus luteum
c. Thickening of the endometrium
d. Decrease of FSH to zero

12 Which of the following hormones is secreted by the corpus luteum? — كويز 1 – 2023

a. LH
b. FSH
c. Human chorionic gonadotropin
d. Progesterone

13 Oogenesis is the production of mature sperm. (True / False) — كويز 1 – 2023

a. True
b. False

14 Implantation begins about the 6th–10th day after fertilization. (True / False) — كويز 1 – 2023

a. True
b. False

15 The blastocyst is composed of: — كويز 1 – 2022

a. Trophoblast and mesoderm
b. Trophoblast and inner cell mass
c. Trophoblast and ectoderm
d. Trophoblast and endoderm

16 The extra-embryonic structure that provides nutrition to the embryo is: كويز 1 – 2022

a. Chorion
b. Placenta
c. Amnion
d. Umbilicus

17 The embryo begins implantation in the uterus: كويز 1 – 2022

a. After 6 weeks
b. In the 3rd week
c. In the 2nd week
d. In the 4th week

18 Ovulation occurs at: كويز 1 – 2022

a. The beginning of the menstrual cycle
b. The middle of the menstrual cycle
c. The end of the menstrual cycle
d. Any time during the cycle

19 The average menstrual cycle will repeat itself about every 28 days. (True / False) كويز 1 – 2021

a. True
b. False

20 The hormone secreted from the anterior pituitary in the first half of the cycle in response to maturation of the follicle inside the ovary: تكرر في 2 مصادر كويز 1 – 2021

a. GnRH
b. FSH
c. Estrogen
d. Prolactin

21 The first day of the menstrual period (menstruation) is counted as the 7th day of the menstrual cycle. (True / False) كويز 1 – 2021

a. True
b. False

22 The hormone that increases sharply during the second half of the cycle and is responsible for maintaining the growth of the endometrial lining is: كويز 1 – 2021

a. Estrogen
b. Progesterone
c. FSH
d. LH

23 Embedding of the fertilized ovum in the upper uterine segment occurs: كويز 1 – 2020

a. 6–8 days after fertilization
b. 3–4 days after fertilization
c. 1 day after fertilization
d. 2 days after fertilization

24 The hormone that enhances ovarian production of progesterone during the second half of the menstrual cycle is: كويز 1 – 2020

a. Growth hormone
b. FSH
c. LH
d. Adrenocorticotropic hormone

25 Union of a mature ovum and sperm to form a zygote means: كويز 1 – 2020

a. Zygote
b. Morula
c. Fertilization
d. Implantation

26 During the first half of the cycle (days 1–14) the pituitary produces _____, which stimulates egg growth. تكرر في 2 مصادر

فاينال 2019–2020 (بنك الأسئلة)

a. Progesterone
b. LH
c. Estrogen
d. FSH

27 Just before ovulation, cervical mucus becomes _____ to promote passage of sperms into the uterus. تكرر في 2 مصادر

فاينال 2019–2020 (بنك الأسئلة)

a. Scant, thick and sticky
b. Thin, clear and elastic
c. Heavy, thin and sticky
d. Scant and thick

28 Mrs. N asks the nurse about the ovarian phases. The nurse tells her the phases occur in the following order: تكرر في 2 مصادر

فاينال 2019–2020 (بنك الأسئلة)

a. Luteal phase, follicular phase, menstrual phase
b. Proliferative phase, ovulation, secretory phase
c. Follicular phase, ovulation phase, luteal phase
d. Follicular phase, ovulation phase, secretory phase

29 During the first half of the cycle (days 1–14) the pituitary produces _____, which stimulates egg growth. تكرر في 2 مصادر

أسئلة سابقة

a. Progesterone
b. LH
c. Estrogen
d. FSH

30 Just before ovulation, cervical mucus becomes _____ to promote passage of sperms into the uterus. تكرر في 2 مصادر

أسئلة سابقة

a. Scant, thick and sticky
b. Thin, clear and elastic
c. Heavy, thin and sticky
d. Scant and thick

31 Mrs. N asks the nurse about the ovarian phases. The nurse tells her the phases occur in the following order: تكرر في 2 مصادر

أسئلة سابقة

a. Luteal phase, follicular phase, menstrual phase
b. Proliferative phase, ovulation, secretory phase
c. Follicular phase, ovulation phase, luteal phase
d. Follicular phase, ovulation phase, secretory phase

32 The first day of the menstrual period (menstruation) is counted as the 7th day of the female's menstrual cycle. (True / False)

أسئلة سابقة

a. True
b. False

33 During the menstrual cycle, what happens if no fertilized ovum is implanted in the uterus?

أسئلة سابقة

a. The corpus luteum stops producing hormones
b. Estrogen continues to grow the endometrium
c. The pituitary releases an increased level of LH
d. The corpus luteum starts secreting progesterone

34 The average menstrual cycle repeats itself about every 28 days. (True / False) أسئلة سابقة

a. True **b.** False

35 The hormone secreted from the anterior pituitary gland in the first half of the cycle in response to maturation of the follicle inside the ovary is: أسئلة سابقة

a. GnRH **b.** FSH
c. Estrogen **d.** Prolactin

36 A student nurse accurately describes FSH and LH by stating that: أسئلة سابقة

a. FSH and LH are released from the anterior pituitary gland
b. FSH and LH are secreted by the corpus luteum
c. FSH and LH are secreted by the adrenal glands
d. FSH and LH are released from the posterior pituitary

37 The fetal circulation (umbilical cord) consists of: أسئلة سابقة

a. Two umbilical veins and one artery
b. Two umbilical arteries and one vein
c. Arteries carrying oxygenated blood to the fetus
d. Veins carrying deoxygenated blood to the fetus

38 A woman asks the nurse in which part of the fallopian tube fertilization usually occurs. What is the correct response? كويز تجريبي (فورم)

a. Interstitial **b.** Isthmus
c. Ampulla **d.** Fimbria

39 A woman asks: "When does the fertilized ovum reach the uterine cavity?" The nurse's best response is: كويز تجريبي (فورم)

a. About 1 or 2 days after fertilization **b.** About 3 or 4 days after fertilization
c. About 6 or 10 days after fertilization **d.** About 8 or 9 days after fertilization

40 In a lecture on fertilization, which stage of development is the stage of 0 to 10 days' gestation? كويز تجريبي (فورم)

a. Fetal stage **b.** Morula stage
c. Zygote stage **d.** Embryonic stage

41 Which term describes the first menstrual cycle of the female? كويز تجريبي (فورم)

a. Menarche **b.** Puberty
c. Adolescence **d.** Pubescence

42 Each month a developing Graafian follicle produces estrogen which builds up the endometrium. This is called: كويز تجريبي (فورم)

a. The secretory phase **b.** The premenstrual phase
c. The proliferative phase **d.** The menstrual phase

43 In a regular 28-day cycle, ovulation occurs approximately on: كويز تجريبي (فورم)

a. Day 10
b. Day 14
c. Day 21
d. Day 28

44 If conception fails, menstruation occurs about two weeks after ovulation. This is because of: كويز تجريبي (فورم)

a. Enhanced secretion of estrogen
b. Inhibition of FSH
c. Stimulation of LH
d. Decrease in both estrogen and progesterone

45 Which gland produces FSH and LH? كويز تجريبي (فورم)

a. Hypothalamus
b. Anterior pituitary
c. Posterior pituitary
d. Adrenal glands

Part B · NCLEX-Style Practice

أسئلة على طريقة NCLEX (إضافة)

N1 A client with a 28-day cycle asks when she is most fertile. The nurse answers: NCLEX

a. Days 1–5
b. Around day 14
c. Around day 21
d. Day 28

N2 Which hormone surge directly triggers ovulation? NCLEX

a. FSH
b. Estrogen
c. LH
d. Progesterone

N3 After ovulation the cervical mucus becomes thick and sticky. This is mainly due to: NCLEX

a. Estrogen
b. Progesterone
c. FSH
d. Prolactin

N4 Select ALL that are effects of progesterone during the secretory phase. SELECT ALL

a. Endometrial glands become secretory
b. Basal body temperature rises
c. Cervical mucus becomes thin and elastic
d. Endometrium is maintained for implantation
e. FSH increases sharply

N5 If fertilization does not occur, menstruation follows because: NCLEX

a. LH rises
b. The corpus luteum degenerates and estrogen and progesterone fall
c. FSH falls to zero
d. hCG rises

N6 The fertilized ovum reaches the uterine cavity about: NCLEX

a. 1 day after fertilization
b. 3–4 days after fertilization
c. 10 days after fertilization
d. 3 weeks after fertilization

N7 Which statement about the corpus luteum is correct? NCLEX

a. It secretes FSH
b. It secretes mainly progesterone (and some estrogen)
c. It forms before ovulation
d. It is maintained by prolactin

N8 The blastocyst is composed of: NCLEX

a. Trophoblast and inner cell mass
b. Ectoderm and endoderm only
c. Morula and zygote
d. Chorion and amnion

Part C · Quizlet Flashcards

كروت مراجعة سريعة

غطّي العمود الأبيض بورقة واختبر نفسك: شوف المصطلح وقول التعريف.

Menarche	First menstrual period	**FSH**	Anterior pituitary; stimulates follicle growth in the first half of the cycle
LH surge	Triggers ovulation; LH enhances progesterone production by the corpus luteum	**Ovulation**	Mid-cycle — about day 14 of a 28-day cycle (≈14 days before next menses)
Proliferative phase	Estrogen from the Graafian follicle builds the endometrium	**Secretory phase**	Progesterone matures and maintains the endometrium
Corpus luteum	Secretes progesterone after ovulation	**Menstruation cause**	Fall of both estrogen and progesterone when corpus luteum degenerates
Cervical mucus before ovulation	Thin, clear, elastic (spinnbarkeit)	**Fertilization**	Union of ovum and sperm forming a zygote
Cleavage	Cell division without growth	**Morula reaches uterus**	About 3–4 days after fertilization
Implantation	Begins ≈ day 6–7 (6–10) after fertilization	**Blastocyst**	Trophoblast + inner cell mass
Order of development	Ovum → zygote → embryo → fetus		

Answer Key

الإجابات

1. d — Decrease in both estrogen and progesterone

2. b — The middle

3. b — FSH

4. c — Ovum, zygote, embryo, fetus

5. c — Uterine tube

6. d — Progesterone

7. a — Cleavage

8. b — Placenta

9. a — Ampulla of the oviduct

10. a — Ovulation

11. c — Thickening of the endometrium

12. d — Progesterone

13. b — False

14. a — True

15. b — Trophoblast and inner cell mass

16. b — Placenta

17. c — In the 2nd week
Implantation starts about day 6–7 after fertilization and is completed during the 2nd week. (The marked answer on the original screenshot was 3rd week.)

18. b — The middle of the menstrual cycle

19. a — True

20. b — FSH

21. b — False

22. b — Progesterone

23. a — 6–8 days after fertilization

24. c — LH

25. c — Fertilization

26. d — FSH

27. b — Thin, clear and elastic

28. c — Follicular phase, ovulation phase, luteal phase

29. d — FSH

30. b — Thin, clear and elastic

31. c — Follicular phase, ovulation phase, luteal phase

32. b — False

33. a — The corpus luteum stops producing hormones

34. a — True

35. b — FSH

36. a — FSH and LH are released from the anterior pituitary gland

37. b — Two umbilical arteries and one vein

38. c — Ampulla

39. b — About 3 or 4 days after fertilization

40. c — Zygote stage

41. a — Menarche

42. c — The proliferative phase

43. b — Day 14

44. d — Decrease in both estrogen and progesterone

45. b — Anterior pituitary

N1. b — Around day 14
Ovulation occurs about 14 days before the next menses; in a 28-day cycle that is about day 14.

N2. c — LH
A mid-cycle LH surge causes rupture of the mature Graafian follicle.

N3. b — Progesterone
Progesterone from the corpus luteum thickens mucus; estrogen makes it thin, clear and stretchy (spinnbarkeit) before ovulation.

N4. a, b, d — Endometrial glands become secretory; Basal body temperature rises; Endometrium is maintained for implantation
Progesterone prepares and maintains the endometrium and raises basal temperature; thin mucus is an estrogen effect.

N5. b — The corpus luteum degenerates and estrogen and progesterone fall
Without hCG the corpus luteum regresses about 14 days after ovulation, hormone levels fall and the functional endometrium sheds.

N6. b — 3–4 days after fertilization
The morula enters the uterus about day 3–4, and implantation starts around day 6–7.

N7. b — It secretes mainly progesterone (and some estrogen)
The corpus luteum forms from the ruptured follicle and secretes progesterone; in pregnancy it is maintained by hCG.

N8. a — Trophoblast and inner cell mass

The trophoblast forms the placenta/chorion; the inner cell mass forms the embryo.
