MATERNAL & NEWBORN HEALTH NURSING · LECTURE 4 · QUESTION BANK

Physiological Changes During Pregnancy

التغيرات الفسيولوجية أثناء الحمل — بنك الأسئلة

19	8	13
Past exam questions	NCLEX-style	Flashcards

المصادر اللي اتجمعت منها أسئلة المحاضرة دي:

أسئلة سابقة · فاينال 2019–2020 (بنك الأسئلة) · كويز 1 – 2023 · ميدترم 2021–2022 · ميدترم 2022–2023

جنب كل سؤال مصدره. لو السؤال اتكرر في كذا امتحان مكتوب كل مرة بمصدرها، وعليه علامة "تكرر". الإجابات كلها في آخر الملف.

اللَّهُمَّ لا سَهْلَ إِلَّا ما جَعَلْتَهُ سَهْلًا، وأنتَ تَجْعَلُ الحَزْنَ إذا شِئْتَ سَهْلًا — صلِّ على النبي ﷺ

Part A · Past Exam Questions

أسئلة الدفعات السابقة

1 Chloasma is softening of the lower uterine segment. (True / False) تكرر في 2 مصادر — ميدترم 2022–2023

a. True **b.** False

2 A change of the cardiovascular system that is NOT related to pregnancy is: — ميدترم 2022–2023

a. Increased systemic vascular resistance **b.** Decreased blood pressure
c. Increased blood volume **d.** Increased cardiac output

3 Linea nigra is a line of pigmentation between the umbilicus and the symphysis pubis. (True / False) — ميدترم 2022–2023

a. True **b.** False

4 The uterine muscle mass enlarges during the first trimester of pregnancy mainly because of: — ميدترم 2021–2022

a. Enlarged fetus **b.** Hypertrophy
c. Hyperplasia **d.** Increase of prostaglandin hormone

5 What hormone is responsible for the decrease in systemic vascular resistance during pregnancy? — ميدترم 2021–2022

a. Progesterone **b.** Estrogen
c. Vasopressin **d.** Human chorionic gonadotropin

6 Which urinary symptom does the pregnant woman most frequently experience during the first trimester? — ميدترم 2022–2021

a. Dysuria
b. Frequency
c. Incontinence
d. Burning

7 An increase in vaginal secretions during pregnancy is called leukorrhea and is caused by increased production of estrogen. (True / False) — ميدترم 2022–2021

a. True
b. False

8 A 36-week gravid client complains of dyspnea when lying flat. The likely clinical reason is: — ميدترم 2022–2021

a. Maternal hypertension
b. Fundal height
c. Polyhydramnios
d. Congestive heart failure

9 A woman 6 weeks pregnant is having a vaginal examination. Which would the practitioner expect to find? — ميدترم 2022–2021

a. Thin cervical muscle
b. An enlarged ovary
c. Thick cervical mucus
d. Pale pink vaginal wall

10 The mother may experience shortness of breath at the end of the third trimester. This is most probably the result of: — كويز 1 – 2023

a. Normal occurrence because the fetus is using more oxygen
b. The fundus of the uterus is high, pushing the diaphragm upwards
c. An allergic reaction to the pregnancy hormones
d. Anemia of pregnancy

11 Chloasma is softening of the lower uterine segment. (True / False) تكرر في 2 مصادر — كويز 1 – 2023

a. True
b. False

12 A physiological change of the cardiovascular system that does NOT occur during pregnancy is: تكرر في 2 مصادر — فاينال 2020–2019 (بنك الأسئلة)

a. Increased systemic vascular resistance
b. Decreased blood pressure
c. Increased blood volume
d. Increased cardiac output

13 Chloasma is an irregular hyperpigmented area on the: تكرر في 2 مصادر — فاينال 2020–2019 (بنك الأسئلة)

a. Breast, areola and nipples
b. Cheek, nose, forehead and neck
c. Abdomen, breast and thighs
d. Cheeks, forehead and nose

14 The increase of blood volume during pregnancy is made of: تكرر في 2 مصادر — فاينال 2020–2019 (بنك الأسئلة)

a. Plasma only
b. Erythrocytes only
c. More plasma than erythrocytes
d. More erythrocytes than plasma

15 A physiological change of the cardiovascular system that does NOT occur during pregnancy is: تكرر في 2 مصادر — أسئلة سابقة

a. Increased systemic vascular resistance
b. Decreased blood pressure
c. Increased blood volume
d. Increased cardiac output

16 Which rationale best explains why a pregnant woman should lie on her left side when resting or sleeping? — أسئلة سابقة

a. To prevent compression of the vena cava
b. To facilitate digestion
c. To facilitate bladder emptying
d. To avoid fetal anomalies

17 The weight of the uterus on the inferior vena cava and iliac veins obstructs blood flow from the lower regions. This can lead to: — أسئلة سابقة

a. Dependent edema
b. Physiologic anemia
c. Hemodilution
d. Varicose veins of the vulva only

18 Chloasma is an irregular hyperpigmented area on the: تكرر في 2 مصادر — أسئلة سابقة

a. Breast, areola and nipples
b. Cheek, nose, forehead and neck
c. Abdomen, breast and thighs
d. Cheeks, forehead and nose

19 The increase of blood volume during pregnancy is made of: تكرر في 2 مصادر — أسئلة سابقة

a. Plasma only
b. Erythrocytes only
c. More plasma than erythrocytes
d. More erythrocytes than plasma

Part B · NCLEX-Style Practice

أسئلة على طريقة NCLEX (إضافة)

N1 A woman at 30 weeks becomes dizzy when lying flat on her back. The nurse's first action is to: NCLEX

a. Elevate her legs
b. Turn her onto her left side
c. Give oxygen
d. Lower the head of bed

N2 A pregnant client's Hb is 10.8 g/dL at 28 weeks. The nurse explains this is most likely due to: NCLEX

a. Iron overdose
b. Hemodilution (plasma increases more than RBCs)
c. Bleeding
d. Decreased blood volume

N3 Select ALL normal cardiovascular changes of pregnancy. SELECT ALL

a. Increased cardiac output
b. Increased blood volume
c. Decreased systemic vascular resistance
d. Increased systemic vascular resistance
e. Slight rise in heart rate

N4 A client asks about the dark line on her abdomen. The nurse documents it as: NCLEX

a. Chloasma
b. Linea nigra
c. Striae gravidarum
d. Spider nevi

N5 Urinary frequency in the first trimester is mainly caused by: NCLEX

a. UTI
b. Pressure of the enlarging uterus on the bladder
c. Decreased renal blood flow
d. Glycosuria

N6 Which complaint at 36 weeks is expected and explained by the high fundus? NCLEX

a. Shortness of breath
b. Severe headache
c. Visual disturbances
d. Epigastric pain

N7 Increased vaginal discharge (leukorrhea) in pregnancy is caused by: NCLEX

a. Infection always
b. Increased estrogen
c. Decreased progesterone
d. Low pH only

N8 Early uterine enlargement in the first trimester is mainly due to: NCLEX

a. Hypertrophy only
b. Hyperplasia stimulated by estrogen
c. Fetal size
d. Amniotic fluid

Part C · Quizlet Flashcards

كروت مراجعة سريعة

غطّي العمود الأبيض بورقة واختبر نفسك: شوف المصطلح وقول التعريف.

Blood volume	↑ 40–50%; more plasma than RBCs	**Physiologic anemia**	Hemodilution from plasma increase
Systemic vascular resistance	↓ due to progesterone	**Cardiac output**	↑ 30–50%
Supine hypotension	Uterus compresses vena cava → lie on left side	**Dependent edema**	Uterus obstructs venous return from lower limbs
Chloasma	Mask of pregnancy — cheeks, forehead, nose	**Linea nigra**	Dark line from umbilicus to symphysis pubis
Leukorrhea	↑ vaginal discharge due to ↑ estrogen	**Urinary frequency**	1st trimester (uterus on bladder) and late 3rd trimester
Dyspnea late pregnancy	High fundus pushes diaphragm up	**Uterine growth early**	Hyperplasia (estrogen); later hypertrophy
Cervix in early pregnancy	Thick mucus plug (operculum)		

Answer Key

الإجابات

1. b — False

2. a — Increased systemic vascular resistance

3. a — True

4. c — Hyperplasia
Early uterine growth is due to hyperplasia (estrogen effect); later growth is mainly hypertrophy and stretching.

5. a — Progesterone

6. b — Frequency

7. a — True

8. b — Fundal height

9. c — Thick cervical mucus

10. b — The fundus of the uterus is high, pushing the diaphragm upwards

11. b — False

12. a — Increased systemic vascular resistance

13. d — Cheeks, forehead and nose

14. c — More plasma than erythrocytes

15. a — Increased systemic vascular resistance

16. a — To prevent compression of the vena cava

17. a — Dependent edema

18. d — Cheeks, forehead and nose

19. c — More plasma than erythrocytes

N1. b — Turn her onto her left side
Supine hypotension results from uterine compression of the inferior vena cava; left lateral position relieves it.

N2. b — Hemodilution (plasma increases more than RBCs)
Plasma volume rises about 40–50% versus RBC mass about 20–30%, causing physiologic anemia.

N3. a, b, c, e — Increased cardiac output; Increased blood volume; Decreased systemic vascular resistance; Slight rise in heart rate
Progesterone decreases systemic vascular resistance; an increase is NOT a normal change.

N4. b — Linea nigra
Linea nigra is pigmentation between the umbilicus and symphysis pubis.

N5. b — Pressure of the enlarging uterus on the bladder
The enlarging uterus in the pelvis presses on the bladder; frequency returns in the third trimester with lightening.

N6. a — Shortness of breath
The fundus pushes the diaphragm upward; headache, visual changes and epigastric pain suggest preeclampsia.

N7. b — Increased estrogen
Estrogen increases vascularity and mucus production.

N8. b — Hyperplasia stimulated by estrogen
Early growth is hyperplasia; later growth is hypertrophy and stretching.
