المصادر اللي اتجمعت منها أسئلة المحاضرة دي:

أسئلة سابقة · فاينال 2019–2020 (بنك الأسئلة) · كويز 1 – 2023 · ميدترم 2022–2021 · ميدترم 2023–2022

جنب كل سؤال مصدره. لو السؤال اتكرر في كذا امتحان مكتوب كل مرة بمصدرها، وعليه علامة "تكرر". الإجابات كلها في آخر الملف.

اللَّهُمَّ لا سَهْلَ إِلَّا ما جَعَلْتَهُ سَهْلًا، وأنتَ تَجْعَلُ الحَزْنَ إذا شِئْتَ سَهْلًا — صلِّ على النبي ﷺ

Part A · Past Exam Questions

أسئلة الدفعات السابقة

1 Which of the following is a positive (sure) sign of pregnancy? — ميدترم 2023–2022

a. Fetal movement felt by the mother
b. Enlargement of the uterus
c. Positive pregnancy test
d. Positive ultrasound

2 Positive ballottement in the woman's prenatal record indicates: — ميدترم 2023–2022

a. Palpable contractions on the abdomen
b. Passive movement of the unengaged fetus
c. Fetal kicking felt by the client
d. Enlargement and softening of the uterus

3 Uterine soufflé is a sound made by the rushing of maternal blood to the placenta and its rate is the same as the woman's pulse. (True / False) تكرر في 2 مصادر — ميدترم 2023–2022

a. True
b. False

4 Which would the nurse do to examine for the presence of Chadwick's sign? — ميدترم 2023–2022

a. Auscultate for fetal heart sounds
b. Palpate the abdomen for fetal movement
c. Assess the cervix for color
d. Initiate a gentle upward tap on the cervix

5 In a multipara, quickening occurs after 20 weeks. (True / False) — ميدترم 2022–2021

a. True
b. False

6 Which of the following indicates a probable sign of pregnancy? ميدترم 2022–2021

a. Uterine enlargement
b. Fetal heart rate detected by a non-electronic device
c. Outline of the fetus via radiography or ultrasound
d. Nausea and vomiting

7 An adaptation of pregnancy is increased blood supply to the pelvic region resulting in purplish discoloration of the cervix and vaginal mucosa, known as: ميدترم 2022–2021

a. Ladin's sign
b. Hegar's sign
c. Goodell's sign
d. Chadwick's sign

8 Uterine soufflé is a sound made by the rushing of maternal blood to the placenta, and its rate is the same as the woman's pulse. (True / False) تكرر في 2 مصادر ميدترم 2022–2021

a. True
b. False

9 A bluish discoloration of the vaginal mucosa means which of the following? كويز 1 – 2023

a. Ladin's sign
b. Hegar's sign
c. Goodell's sign
d. Chadwick's sign

10 Painless, intermittent contractions of the uterus that begin early in pregnancy and continue throughout gestation are called: تكرر في 2 مصادر فاينال 2020–2019 (بنك الأسئلة)

a. Goodell's sign
b. Ballottement
c. Hegar's sign
d. Braxton Hicks contractions

11 Which of the following is a probable sign of pregnancy? تكرر في 2 مصادر فاينال 2020–2019 (بنك الأسئلة)

a. Amenorrhea
b. Goodell's sign
c. Fetal heart rate detected by an electronic device
d. Nausea and vomiting

12 At 8 weeks you note a bluish coloration of the mucous membrane of the cervix, vagina and vulva. You document this as: تكرر في 2 مصادر فاينال 2020–2019 (بنك الأسئلة)

a. Hegar's sign
b. Goodell's sign
c. Chadwick's sign
d. A positive sign

13 The first fetal movement felt by the mother is known as: تكرر في 2 مصادر فاينال 2020–2019 (بنك الأسئلة)

a. Lightening
b. Quickening
c. Ballottement
d. Engagement

14 A woman with regular menstruation comes to the clinic complaining of spotting blood two to three days before her expected menstruation. What is the appropriate answer? أسئلة سابقة

a. It could be due to an ovarian tumor
b. It could be from implantation of the zygote
c. It is your normal menstruation
d. You may need to do an ultrasound

15 During assessment of a pregnant woman, the nurse notes a bluish discoloration of the cervix. The nurse documents this as: أسئلة سابقة

a. Braxton Hicks contractions
b. Chadwick's sign
c. McDonald's sign
d. Goodell's sign

16 The instructor asks the student to describe quickening. Which statement indicates understanding? أسئلة سابقة

a. It is the irregular, painless contractions that occur throughout pregnancy
b. It is the fetal movement that is felt by the mother
c. It is the thinning of the lower uterine segment
d. It is the soft blowing sound heard when the uterus is auscultated

17 A pregnant woman reports irregular contractions; the nurse determines they are Braxton Hicks contractions. Which nursing action is most appropriate? أسئلة سابقة

a. Instruct the woman to contact the health care provider
b. Instruct her to maintain bed rest for the rest of pregnancy
c. Inform her that these contractions may occur throughout pregnancy
d. Call the maternity unit and inform them she is in prelabor

18 To test for the presence of ballottement, the nurse-midwife would: أسئلة سابقة

a. Auscultate for fetal heart sounds
b. Palpate the abdomen for fetal movement
c. Assess the cervix for thinning
d. Initiate a gentle upward tap on the cervix

19 Painless, intermittent contractions of the uterus that begin early in pregnancy and continue throughout gestation are called: تكرر في 2 مصادر أسئلة سابقة

a. Goodell's sign
b. Ballottement
c. Hegar's sign
d. Braxton Hicks contractions

20 Which of the following is a probable sign of pregnancy? تكرر في 2 مصادر أسئلة سابقة

a. Amenorrhea
b. Goodell's sign
c. Fetal heart rate detected by an electronic device
d. Nausea and vomiting

21 At 8 weeks you note a bluish coloration of the mucous membrane of the cervix, vagina and vulva. You document this as: تكرر في 2 مصادر

أسئلة سابقة

a. Hegar's sign
b. Goodell's sign
c. Chadwick's sign
d. A positive sign

22 The first fetal movement felt by the mother is known as: تكرر في 2 مصادر

أسئلة سابقة

a. Lightening
b. Quickening
c. Ballottement
d. Engagement

23 Goodell's sign indicates:

أسئلة سابقة

a. Softening of the cervix
b. Soft blowing uterine sound synchronous with the maternal pulse
c. hCG in the urine
d. Fetal movement

Part B · NCLEX-Style Practice

أسئلة على طريقة NCLEX (إضافة)

N1 Which finding is a POSITIVE sign of pregnancy? NCLEX

a. Positive urine hCG
b. Hegar's sign
c. Fetal heart tones by Doppler
d. Quickening

N2 Softening of the lower uterine segment at 6–12 weeks is: NCLEX

a. Goodell's sign
b. Hegar's sign
c. Chadwick's sign
d. Ballottement

N3 Select ALL presumptive (subjective) signs of pregnancy. SELECT ALL

a. Amenorrhea
b. Nausea and vomiting
c. Breast tenderness
d. Quickening
e. Ballottement
f. Positive pregnancy test

N4 A false-positive pregnancy test may occur with: NCLEX

a. Hydatidiform (molar) pregnancy
b. Ectopic pregnancy only
c. Early ovulation
d. Dehydration

N5 Fetal heart tones can first be heard with a fetoscope at about: NCLEX

a. 6 weeks
b. 10–12 weeks
c. 20 weeks
d. 28 weeks

N6 A multigravida reports first feeling fetal movement. This most likely occurred at about: NCLEX

a. 8 weeks
b. 16 weeks
c. 28 weeks
d. 32 weeks

N7 The nurse taps upward on the cervix and feels the fetus rebound. This is: NCLEX

a. Quickening
b. Ballottement
c. Lightening
d. Engagement

N8 Funic soufflé corresponds to: NCLEX

a. The maternal pulse
b. The fetal heart rate
c. Uterine contractions
d. Placental separation

Part C · Quizlet Flashcards

كروت مراجعة سريعة

غطّي العمود الأبيض بورقة واختبر نفسك: شوف المصطلح وقول التعريف.

Presumptive signs	Subjective — felt by the woman	**Probable signs**	Objective — found by examiner
Positive signs	Related to the fetus — confirm pregnancy	**Chadwick's sign**	Bluish/purplish cervix and vagina
Goodell's sign	Softening of the cervix	**Hegar's sign**	Softening of lower uterine segment, 6–12 weeks
Ballottement	Rebound of fetus — internal 16 wk, external 20 wk	**Quickening**	First fetal movement felt by mother — primi 20–25 wk, multi ~16 wk
Braxton Hicks	Painless irregular contractions throughout pregnancy	**FHR by Doppler**	10–12 weeks
FHR by fetoscope	~20 weeks	**Uterine soufflé**	Maternal blood to placenta; rate = mother's pulse
Funic soufflé	Blood in cord; rate = FHR	**False-positive hCG**	Molar pregnancy, trophoblastic tumors, pseudocyesis

Answer Key

الإجابات

1. d — Positive ultrasound

2. b — Passive movement of the unengaged fetus

3. a — True

4. c — Assess the cervix for color

5. b — False

6. a — Uterine enlargement

7. d — Chadwick's sign

8. a — True

9. d — Chadwick's sign

10. d — Braxton Hicks contractions

11. b — Goodell's sign

12. c — Chadwick's sign

13. b — Quickening

14. b — It could be from implantation of the zygote

15. b — Chadwick's sign

16. b — It is the fetal movement that is felt by the mother

17. c — Inform her that these contractions may occur throughout pregnancy

18. d — Initiate a gentle upward tap on the cervix

19. d — Braxton Hicks contractions

20. b — Goodell's sign

21. c — Chadwick's sign

22. b — Quickening

23. a — Softening of the cervix

N1. c — Fetal heart tones by Doppler
Positive signs relate to the fetus: FHR, fetal movement felt by examiner, ultrasound visualization.

N2. b — Hegar's sign
Hegar's = soft isthmus; Goodell's = soft cervix; Chadwick's = bluish cervix.

N3. a, b, c, d — Amenorrhea; Nausea and vomiting; Breast tenderness; Quickening
Ballottement and hCG test are probable (objective) signs.

N4. a — Hydatidiform (molar) pregnancy
Molar pregnancy, trophoblastic neoplasms, pseudocyesis, user error and fertility drugs.

N5. c — 20 weeks
Doppler detects FHR at 10–12 weeks; fetoscope at about 20 weeks.

N6. b — 16 weeks
Multigravidas may notice quickening from about 16 weeks; primigravidas often at 20–25 weeks.

N7. b — Ballottement
Ballottement is a probable sign (internal about 16 weeks).

N8. b — The fetal heart rate
Funic soufflé = fetal blood through the cord; uterine soufflé = maternal pulse.
