Past exam questions	NCLEX-style	Flashcards

المصادر اللي اتجمعت منها أسئلة المحاضرة دي:

ميدترم ترم أول 2023/2024 (ورقة الامتحان) · ميدترم 2022 · ميدترم 2021 · ميدترم 2020 · فاينال ترم أول 2025

كويز 2 – 2022 (Microsoft Forms) · ميدترم ترم تاني 2023/2024 (شعبة 3 و 4)

جنب كل سؤال مصدره. لو السؤال اتكرر في كذا امتحان مكتوب كل مرة بمصدرها، وعليه علامة "تكرر". الإجابات كلها في آخر الملف.

اللَّهُمَّ لا سَهْلَ إِلَّا ما جَعَلْتَهُ سَهْلًا، وأنتَ تَجْعَلُ الحَزْنَ إذا شِئْتَ سَهْلًا — صلِّ على النبي ﷺ

Part A · Past Exam Questions

أسئلة الدفعات السابقة

1 What should the nurse do when the total Apgar score for a newborn is 3? — فاينال ترم أول 2025

a. Need resuscitation
b. Need oxygen
c. Need close observation
d. Need suction

2 The nurse immediately dries the newborn from amniotic fluid to conserve the neonate's heat, which of the following methods? — فاينال ترم أول 2025

a. Radiation
b. Conduction
c. Convection
d. Evaporation

3 Neonatal reflexes that are present at birth represent the first features of adaptation. (True / False) — ميدترم 2020

a. True
b. False

4 An infant who had an Apgar score of six indicates ..... difficulty adjusting to extra-uterine life. — ميدترم 2020

a. Mild
b. Severe
c. Absent
d. Moderate

5 The nurse should prevent heat loss in the newborn infant resulting from evaporation by: — ميدترم 2020

a. Turning on the overhead radiant warmer
b. Closing the doors to the room
c. Warming the crib pad
d. Drying the infant with a warm blanket

6 The first factor that fosters initial breathing after birth is: — ميدترم 2021

a. Mechanical
b. Chemical
c. Temperature
d. Sensory stimuli

7 The nurse should prevent heat loss in the newborn resulting from evaporation by: — ميدترم 2021

a. Warming the crib pad
b. Drying the infant with a warm blanket
c. Closing the doors to the room
d. Turning on the overhead radiant warmer

8 Metabolism of brown fat in the newborn helps them adapt to room temperature. (True / False) — ميدترم 2022

a. True
b. False

9 Which of the following factors increases the susceptibility to heat loss in neonates? — ميدترم 2022

a. Large body surface area
b. Increased ability to control their metabolic rate
c. Increased insulation due to a lot of fat
d. Blood vessels of the newborn are deeper in the muscle

10 While the newborn loses heat from the amniotic fluid immediately after birth, this method of heat loss is called ..... — ميدترم ترم أول 2023/2024 (ورقة الامتحان)

a. Radiation
b. Conduction
c. Convection
d. Evaporation

11 The ductus venosus constricts in response to: — ميدترم ترم ثاني 2023/2024 (شعبة 3 و 4)

a. Clamping of the umbilical cord after birth
b. Increased oxygen and decreased resistance in lungs
c. Dilatation of pulmonary blood vessels
d. Increased pressure in the left side of the heart

12 Which of the following is the mechanical factor that influences initiation of the first breath after birth? — ميدترم ترم ثاني 2023/2024 (شعبة 3 و 4)

a. Hypothermia
b. Noises
c. Decreased oxygen
d. Vaginal squeezing

13 Which of the following is a function of brown adipose tissue (BAT) in the newborn? — ميدترم ترم ثاني 2023/2024 (شعبة 3 و 4)

a. Generates heat for distribution to other parts of the body
b. Provides a ready source of calories in the newborn period
c. Protects the infant from injury during the birth process
d. Insulates the body against lowered environmental temperature

14 The Apgar score is used to determine which of the following? — ميدترم ترم ثاني 2023/2024 (شعبة 3 و 4)

a. Gestational age of the newborn
b. Future intelligence of the newborn
c. Major body system's response at birth
d. Level of parent and newborn interaction

15 Placing an infant in the direct flow of air from a fan causes rapid heat loss through: ميدترم ترم تاني 2023/2024 (شعبة 3 و 4)

a. Convection
b. Radiation
c. Evaporation
d. Conduction

16 One of the earliest indicators of successful adaptation of the newborn is the APGAR score; when the score is 3 this means the newborn requires: كويز 2 – 2022 (Microsoft Forms)

a. Resuscitative intervention
b. Oxygen mask
c. Warmth and suction
d. Close observation

Part B · NCLEX-Style Practice

أسئلة على طريقة NCLEX (إضافة)

N1 Which is the MECHANICAL stimulus for the first breath? NCLEX

a. Cold air
b. Vaginal squeeze followed by chest recoil
c. Low oxygen
d. Noise

N2 The ductus venosus closes because: NCLEX

a. Lung expansion
b. Clamping of the umbilical cord
c. Increased left atrial pressure
d. Prostaglandins

N3 Select ALL methods to prevent neonatal heat loss. SELECT ALL

a. Dry immediately (evaporation)
b. Warm surfaces and scales (conduction)
c. Avoid drafts (convection)
d. Place under radiant warmer (radiation)
e. Bathe immediately after birth

N4 Brown adipose tissue in the newborn mainly: NCLEX

a. Stores calories for later
b. Generates heat (non-shivering thermogenesis)
c. Protects organs from trauma
d. Insulates only

N5 An Apgar score of 3 at 1 minute indicates: NCLEX

a. Normal adaptation
b. Moderate difficulty
c. Severe distress needing resuscitation
d. Mild difficulty

N6 The foramen ovale closes functionally because: NCLEX

a. Left atrial pressure becomes higher than right
b. Ductus arteriosus opens
c. Pulmonary resistance rises
d. Umbilical vein stays open

Part C · Quizlet Flashcards

كروت مراجعة سريعة

غطّي العمود الأبيض بورقة واختبر نفسك: شوف المصطلح وقول التعريف.

First breath	Mechanical (vaginal squeeze/recoil), chemical, thermal, sensory.	**Ductus venosus**	Closes with cord clamping.
Foramen ovale	Closes as left atrial pressure rises.	**Ductus arteriosus**	Closes with rising O2.
Brown fat	Non-shivering thermogenesis.	**Evaporation**	Wet skin → dry immediately.
Conduction	Cold surfaces → warm crib pad/scale.	**Convection**	Air flow/fan → avoid drafts.
Radiation	Cold walls/windows → radiant warmer.	**Heat loss risk**	Large surface area, thin fat.
Apgar	HR, respiration, tone, reflex, color; 0–3 severe.	**Apgar 6**	Moderate difficulty.

Answer Key

الإجابات

1. a — Need resuscitation

2. d — Evaporation

3. a — True

4. d — Moderate

5. d — Drying the infant with a warm blanket

6. a — Mechanical

7. b — Drying the infant with a warm blanket

8. a — True

9. a — Large body surface area

10. d — Evaporation

11. a — Clamping of the umbilical cord after birth
إجابة مقترحة (المصدر مفيهوش إجابة رسمية).

12. d — Vaginal squeezing
إجابة مقترحة (المصدر مفيهوش إجابة رسمية).

13. a — Generates heat for distribution to other parts of the body
إجابة مقترحة (المصدر مفيهوش إجابة رسمية).

14. c — Major body system's response at birth
إجابة مقترحة (المصدر مفيهوش إجابة رسمية).

15. a — Convection
إجابة مقترحة (المصدر مفيهوش إجابة رسمية).

16. a — Resuscitative intervention

N1. b — Vaginal squeeze followed by chest recoil
Thoracic compression during birth expels lung fluid; recoil draws air in.

N2. b — Clamping of the umbilical cord
Cord clamping stops umbilical venous flow so the ductus venosus closes.

N3. a, b, c, d — Dry immediately (evaporation); Warm surfaces and scales (conduction); Avoid drafts (convection); Place under radiant warmer (radiation)
Early bathing increases heat loss.

N4. b — Generates heat (non-shivering thermogenesis)
Brown fat metabolism produces heat.

N5. c — Severe distress needing resuscitation
0–3 severe, 4–6 moderate, 7–10 good adaptation.

N6. a — Left atrial pressure becomes higher than right
Increased pulmonary flow raises left atrial pressure, pushing the flap closed.
